Capsule in toilet paper

N° 18,498 A.D. 1892

Date of Application, 15th Oct., 1892
Complete Specification Left, 11th July, 1893—Accepted, 23rd Sept., 1893

PROVISIONAL SPECIFICATION.

Improved Disinfecting Toilet Paper.

We, JAMES McHARDY of Fairfax House Chiswick Middlesex, Scientific Expert and MAURICE EDMUND ARNOLD WALLIS of Annandale House Chiswick Middlesex Medical Practitioner do hereby declare the nature of this invention to be as follows :—

Aware of the existence of so-called terebene paper as a disinfectant, we purpose adopting the following system, which has many advantages both as to cost and efficiency : By any suitable means, we, practically attach a minute packet of permanganate of potash or other effective disinfectant to each leaf, or, at intervals, upon each roll of paper. These packets may be manufactured separately, and afterwards attached, or, we may so manipulate the material as to cause the packet to be made up wholly, or in part, of the paper itself : moreover, these said packets, or capsules of the disinfectant, may be of any shape or size, suitable for our purpose. Gum, gold-size, or any adhesive material may be used in the construction of such packets ; or, if found practicable, we may grind in, or otherwise attach, a sufficient quantity of disinfectant, at the edge of the toilet-paper, so that, in any case, we do not interfere with the main surface of the paper.

Dated this 15th day of October 1892.

JAMES McHARDY.
MAURICE E. A. WALLIS.

COMPLETE SPECIFICATION.

Improved Disinfecting Toilet Paper.

We JAMES McHARDY of Zoffany House late of Fairfax House Chiswick Middlesex Scientific Expert and MAURICE EDMUND ARNOLD WALLIS of Annandale House Chiswick Middlesex Medical Practitioner do hereby declare the nature of this invention and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement :—

This invention which relates to improved disinfecting toilet paper consists in supplying a capsule or minute quantity of such a chemical as shall be thorough in its action as a disinfectant and harmless to the person using it, with and attached to or folded into the paper itself, so that the virtue of the chemical (say permanganate of potash or an equivalent) may not be lost, and that the operator may always use the right quantity and cannot avoid using it unless he deliberately remove it from the said toilet paper. The attaching or folding in of the chemical upon the paper by means of adhesive or otherwise may be performed so as to form a packet or capsule of any shape or form.

Having now particularly described and ascertained the nature of our said invention, and in what manner the same is to be performed we declare that what we claim is ;

1. The combination of permanganate of potash or an equivalent, wrapped up and attached to the paper, with toilet paper.
2. The application of the said packets or capsules (of any shape or form) to toilet paper.

Dated this 10th day of July 1893.

JAMES McHARDY.
MAURICE E. A. WALLIS.
